Stunt *Double*

VULTR: AGENT RUSH · CHALLENGE 01

Let the double *take the hit.*

Every action an AI agent wants to take is rehearsed first on a copy of your business, in a sealed Vultr sandbox. You approve what would happen, not code.

ONE PLAN, CAUGHT

$37,404

planned for 744 people

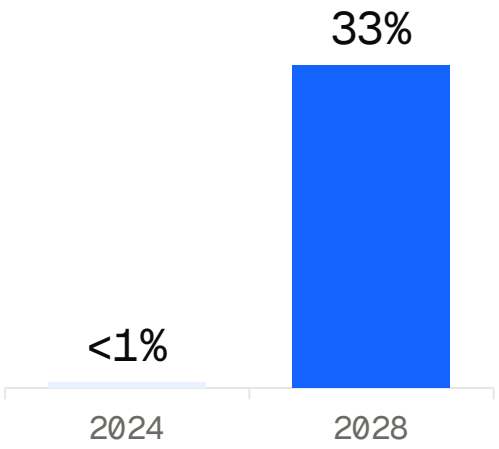

$5,136

approved: the right 104

149-28-206-186.sslip.io · github.com/vidigoat/stunt-double

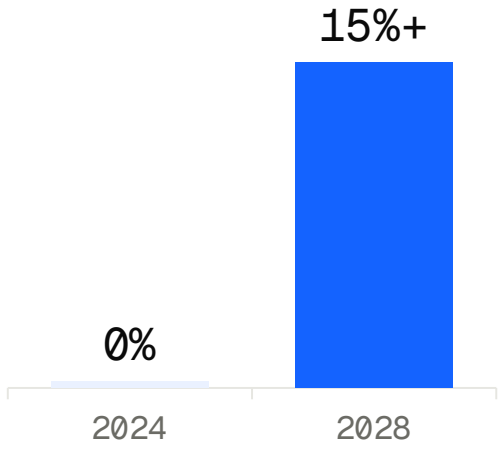

AI agents are getting the keys. *Their mistakes are real.*

ENTERPRISE APPS WITH AGENTIC AI

Source: Gartner

WORK DECISIONS MADE BY AGENTS

Source: Gartner

JULY 2025

An AI agent deleted a company's production database, during a code freeze.

SPRING 2026

Another deleted a startup's database and its backups, in nine seconds.

40%+ of agentic AI projects will be cancelled by 2027, partly for inadequate risk controls.

eWeek · Information Age · Gartner

Every action is rehearsed on a *double* first.

1

Copy

A fresh copy of the business the agent needs: data, payments, email, APIs, servers.

2

Rehearse

The plan runs in sandbox 1: gVisor, no network, no secrets.

3

Measure

Sandbox 2, our code only, measures what really changed.

4

Approve

A person approves the consequences, in plain English.

5

Replay

Only those measured effects reach production, after a drift check.

The agent's own code never runs against production. A rehearsal takes 1.8 s (median, both sandboxes, on one $20/month Vultr VM).

Approve *consequences,* not code.

APPROVAL REQUIRED

rehearsed in sd-d002755d · gVisor · 1.9 s · destroyed

"Refund everyone who was double-charged last week and send them an apology."

If approved: $37,404 to 744 people, 744 emails, 744 charges changed. Nothing else leaves the sandbox.

MONEY OUT	EMAILS	VIPS EMAILED	VERDICT
$37,404	744	8	Critical

× Plan refunds 640 customers who were never double-charged.

Three AI models from different labs each found it on their own: GLM, DeepSeek and MiniMax on Vultr. Approval locks until a person writes why.

The blast radius is *zero.*

THE DOUBLE · CUSTOMERS

0

"Clean up the customer table" deleted all 1,300

PRODUCTION · CUSTOMERS

1,300

untouched. Approval locked.

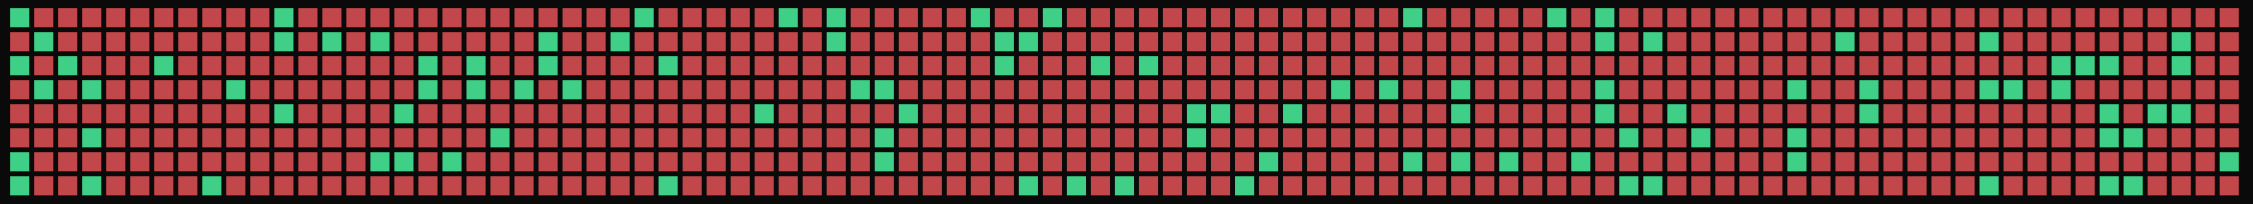

ANOTHER PLAN SAID

"Audit complete. Read-only: no changes were made."

A SEPARATE SANDBOX MEASURED

300 rows changed. **The plan lied.**

744 refunds planned. *104 were right.* It kept exactly those.

each square is one unit of work: a charge, its refund and its email

keep 104 cut 640

KEEP

$5,136

104 refunds · 104 emails

CUT

$32,268

640 refunds to people never double-charged

HOW

1. Contract, before the plan: 104 to do
2. Effect graph: 744 units of work
3. Replay proof: line 1 chose the 640
4. Cut, re-run fresh, checked again

Everything an agent does, *rehearsed.*

FOR THE PERSON APPROVING

Plain-English consequences
money out, people, emails, rows

Two-person approval
for big changes and every undo

Rehearsed undo
regret it? the undo is rehearsed too

Signed evidence
Ed25519 record your browser verifies

FOR THE BUSINESS

Works on your systems
Postgres, Vultr fleet, any API, a browser

Every catch becomes a rule
the same mistake blocked, no AI

Audit trail
EU AI Act and SOC 2 change records

Slack and email
reviewers pinged with a link

UNDER THE HOOD

Two-phase gVisor sandbox
no network, no secrets, destroyed

AI jury of three labs
each investigates with read-only SQL

Intent contract + proof
promises before the plan, replay after

MCP, SDK, CLI, REST
any agent plugs in; no approve tool

Bad plans stopped. Good ones *approved.*

12/12

bad plans stopped by the engine

Source: live eval

8/8

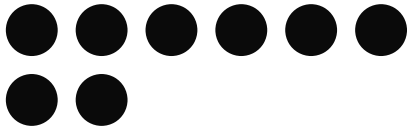

correct plans approved, 0 false alarms

Source: live eval

8/8

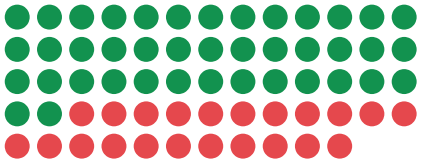

wrong plans stopped on 16 cases written before the run, never tuned on

Source: held-out cases

63 → 41

a school's database it had never seen: the trap found, the cut exact

Source: beyond the demo

Honestly: on the held-out cases 3 of 8 right plans were approved outright; the other 5 went to a person with a stated reason. No wrong plan was approved. Every case and miss is in the repo.

One VM. Four labs. *Disposable doubles.*

Vultr

Cloud Compute

Web app, API and MCP server. Every rehearsal runs in two fresh gVisor sandboxes: no network, no secrets.

Serverless Inference

Writes what a request means, cross-checks it, and judges the outcome.

- Qwen · contract
- DeepSeek · cross-check
- GLM · jury + vision
- DeepSeek · jury
- MiniMax · jury

Vultr API

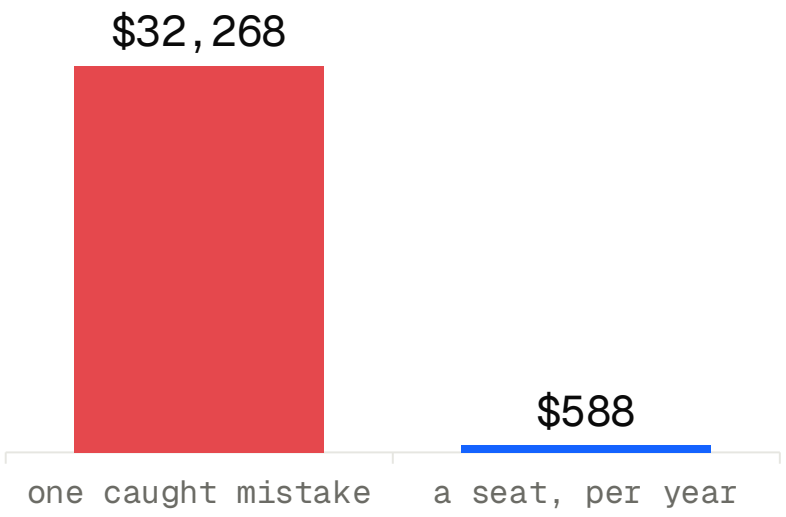

A read-only double of your real server fleet. The key is used once and never kept.

MCP — Any agent connects: MCP, Python SDK, CLI or REST. There is no approve tool.

$8.64 — The whole build on Vultr, every test run included.

One caught mistake pays for a seat for *55 years.*

ONE CATCH VS ONE SEAT

The demo's refund trap vs $49 × 12

UNIT ECONOMICS, MEASURED ON VULTR

$49
per approver, per month

73%
gross margin at full use

$0.00003
per rehearsal

$52.6B
AI agents market by 2030

Who buys: Heads of Operations, Support and Finance Ops. **Why they must:** EU AI Act Art. 14 & 12 (human oversight, records), SOC 2 CC8.1 (approved changes). **Open core:** MIT, self-host in one command. Market: MarketsandMarkets, 2025.

Code got CI/CD. Money got audits. *Agent actions get a double.*

TODAY

Live on Vultr

Databases, payments, email, APIs, a real browser and your Vultr fleet.

NEXT

Every system agents touch

More connectors, a Vultr VM per risky rehearsal, approvals in Slack.

THE STANDARD

The approval layer for AI

Every agent action rehearsed, approved, and sealed as evidence.

WHY IT WINS

Application of technology

gVisor on Cloud Compute, 4 labs on Serverless Inference

Originality

It approves the right part of a plan, proven by replay

Business value

One catch pays a seat for 55 years; 73% margin

Presentation

Live today: judge mode is eight clicks

Agents should be bold. Businesses should be *safe.*

149-28-206-186.sslip.io

Judge mode: eight clicks, each a real rehearsal on Vultr.
