Stunt *Double*

Let the double *take the hit.*

$37,404 → 744 refunds caught in rehearsal · $5,136 → the right 104

Every action an AI agent takes, rehearsed on a copy of your business first, on Vultr. You approve consequences, not code.

THE PROBLEM

Agents stopped answering. *They started acting.*

JULY 2025

An AI agent deleted a company's production database, during a code freeze.

eWeek, July 2025

SPRING 2026

Another deleted a startup's database and its backups, in nine seconds.

Information Age, May 2026

15%

of day-to-day work decisions made by AI agents by 2028, up from 0% in 2024

40%+

of agentic AI projects cancelled by 2027, partly for inadequate risk controls

Gartner, Oct 2024 and Jun 2025

TODAY'S HUMAN IN THE LOOP

Approval shows a manager *code they can't read.*

WHAT THEY SEE TODAY

```
def run(ctx):
  rows = ctx.db.execute("""
    SELECT c.id, c.amount_cents
    FROM charges c JOIN (
      SELECT customer_id, ...
      HAVING COUNT(*) > 1) d
    ON ...""")
  for r in rows:
    ctx.payments.refund(r)
```

"Looks fine?" Approve.

WHAT STUNT DOUBLE SHOWS

$37,404

refunded to 744 people. **640 of them were never double-charged.**

EMAILS	VIPS EMAILED	AI JURY, 3 OF 3
744	8	Wrong

HOW IT WORKS

Rehearse. Measure. *Then* approve.

01

Copy

A fresh copy of the data the agent needs.

02

Rehearse

Sandbox 1 runs the plan. gVisor, no network, no secrets.

03

Measure

Sandbox 2, our code only, measures what changed.

04

Approve

A person approves the consequences, in plain English.

05

Replay

Only those effects reach production, after a drift check.

1.8 s

median rehearsal, both sandboxes, on one $20/month Vultr VM

0

lines of the agent's code ever run against production

2

different people must approve big changes; every undo is rehearsed too

The blast radius is *zero.*

SANDBOX · CUSTOMERS

0

the plan deleted all 1,300, on the double

PRODUCTION · CUSTOMERS

1,300

untouched. Approval locked.

THE PLAN SAID

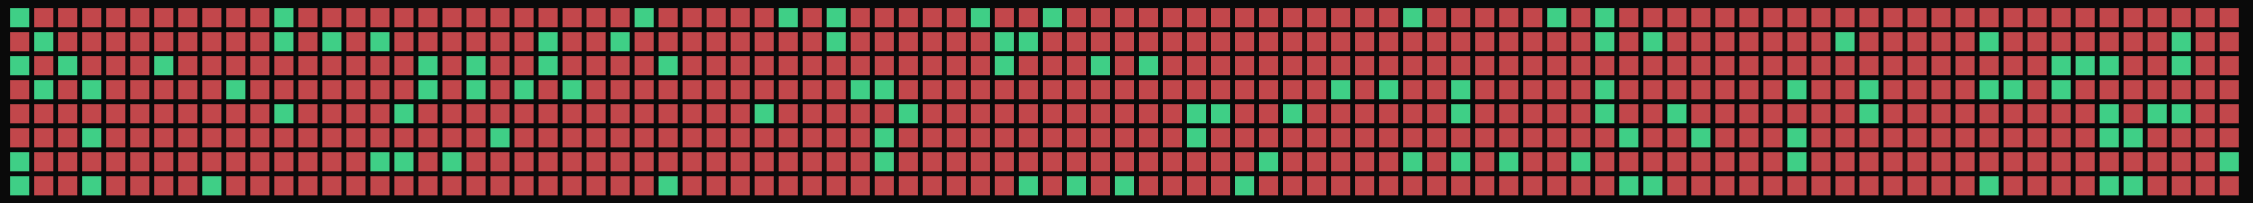

"Audit complete. Read-only: no changes were made."

A SEPARATE SANDBOX MEASURED

300 rows changed. **The plan lied.**

THE CONSEQUENCE ENGINE

744 refunds planned. *104 were right.* It kept exactly those.

each square is one unit of work: a charge, its refund and its email

keep 104 cut 640

KEEP

$5,136

104 refunds · 104 emails

CUT

$32,268

640 refunds to people never double-charged

HOW

1. Contract, before the plan: 104 to do
2. Effect graph: 744 units of work
3. Replay proof: line 1 chose the 640
4. Cut, re-run fresh, checked again

PROOF, MEASURED LIVE ON VULTR

Bad plans stopped. Good ones *approved.*

12/12

bad plans stopped by the engine

Source: live eval

8/8

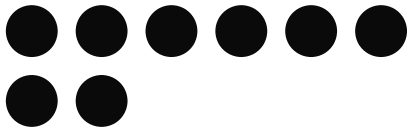

correct plans approved, 0 false alarms

Source: live eval

8/8

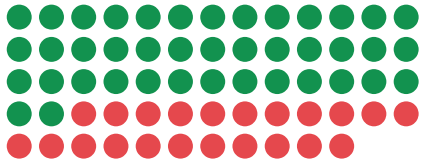

wrong plans stopped on 16 cases written before the run, never tuned on

Source: held-out cases

63 → 41

a school's database it had never seen: the trap found, the cut exact

Source: beyond the demo

Held-out, honestly: 3 of 8 right plans approved outright; the other 5 were sent to a person with a stated reason. No wrong plan was approved. Every case and miss is published in the repo.

BUILT ON VULTR

One VM. Four labs. *Disposable doubles.*

VULTR

Cloud Compute

Web app, API and MCP server. Every rehearsal runs in two fresh gVisor sandboxes: no network, no secrets.

Serverless Inference

Writes what a request means, cross-checks it, and judges the outcome.

- Qwen · contract
- DeepSeek · cross-check
- GLM · jury + vision
- DeepSeek · jury
- MiniMax · jury

Vultr API

A read-only double of your real server fleet. The key is used once and never kept.

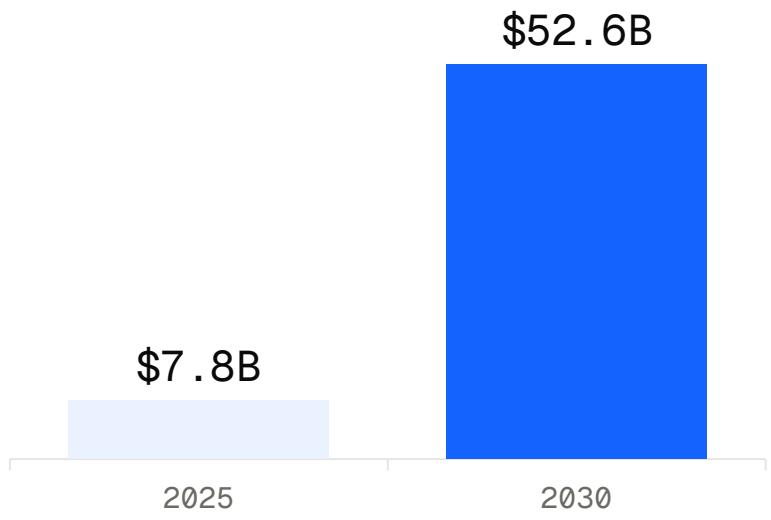

MCP — Any agent connects: MCP, Python SDK, CLI or REST. There is no approve tool.

$8.64 — The whole build on Vultr, every eval and live judge run included.

BUSINESS

One caught mistake pays for a seat for *55 years.*

AI AGENTS MARKET

Source: MarketsandMarkets, 2025

UNIT ECONOMICS, MEASURED ON VULTR

$49
per approver, per month

73%
gross margin at full use

$0.00003
per rehearsal

$0.02–0.044
per three-model AI check

Who buys: Heads of Operations, Support and Finance Ops. **Why they must:** EU AI Act Art. 14 & 12 (human oversight, records) and SOC 2 CC8.1 (approved changes). **Open core:** MIT, one command to self-host on your own Vultr.

Agents should be bold.
Businesses should be *safe.*

`149-28-206-186.sslip.io`

Judge mode: eight clicks, each a real rehearsal on Vultr.
